

## (10) ABSTRACT OF THE DISCLOSURE

Surveillance technology particularly suited to continuous gathering of autobiographical data. Integrated into a portable construction are data collection mechanisms for capturing substantially all perceptual stimulus and acquirable digital data in the immediate vicinity of the system, a data integrator for correlating said autobiographical data, and memory for storing collected data. The unit comprises a programmable device for integrating all data captured into an integrated, content-retrievable format. Data editing formats are also suggested.
